

GMaps Mobile™

Mobile Location Intelligence

GMaps Mobile is a business productivity app that allows workers to visualize business data aligned to a geographic location. Interact with multiple layers of data within a Google Maps™ experience while you visualize, analyze, and navigate to your most important customers, assets, and events.

Prioritize

Save hours trying to figure out where to focus your energy and use location intelligence to streamline the process. Visit more customers, route products faster, and discover hidden opportunities!

Analyze

Harness your tablet's location awareness to analyze and reference customers, assets, events, or anything else with a location. Visualize and interact with color coded points and regions with ease.

Mashup

Combine and layer business information from multiple data sources. Uncover trends and immediately share your insights with other mobile workers from the comfort of your mobile device.
